A PLASTER BASE

for narrow places and odd corners

USE IT

for forming plaster reveals around window and door openings.

*

for small form work such as a base for ornamental friezes.

*

for reinforcing odd shaped corners.

*

for all types of plastering patch work.

DESIGN DIVISION

KEEP a few bundles of Truscon STRIP-ITE on the job—and watch the savings in your metal lath bills. No more full sheets wasted just to finish off an irregular corner. No more time lost in cutting strips and patches out of full sheets. Truscon Strip-ite is a diamond metal lath strip made in either 3″, 4″ or 6″ widths, 8′-1″ long. It is furnished in bundles of 50 pieces. It is easily bent to form and economical to handle.

Ask your dealer for samples.

TRUSCON STRIP-ITE

USE IT

for wrapping beams where two or three narrow strips are sufficient to cover an exposed area.

*

for any openings that are narrower than a full width sheet of lath.

*

for reinforcing the joints between sheets of patented wall board to prevent cracking of plaster.
